Project Details:

Group Size: 2

Topic and Scope: Pizzeria website. The system will allow users to view the menu, learn about pizzeria.

Synopsis:

Project Title:

Pizzeria Website

Description:

This project is about creating a website for a pizzeria.

Problem Statement:

Create a simple website to help local businesses in Kamloops. The site will help users view such things as menu of pizzeria , special deals, etc. Probably site also will have order system, login system, delivery and pickup options, contact and location options

Goals and objectives:

- make the website easy to use for all customers
- make a website where customers can order pizza
- show the menu with prices and pictures
- give delivery and pickup options

- allow customers to choose pizza size and toppings

Features:
- **Menu**
  View all the items the pizzeria offers spit into make sense sections with pictures
- **Coupons page**
  A dedicated page to showcase ongoing coupons and special offers so users can find a deal that works for them.
- **Online ordering**
  Through the menu and coupons page users can order to pick up or be delivered right to their door.
- **User Accounts**
  Users can make accounts to save their favourite menu items and checkout info like payment and delivery address for a faster ordering experience.
- **Location Finder**
  Users will be able to see if there is a location close by them if they want to order at the store or if they're in the delivery range.
- **Points**
  An additional feature of user accounts, points can be earned on purchases and redeemed for special deals and discounts.

Scope and limitations:
Scope:
- The website will allow watch menu and order pizza
- The website will have simple pizza constructor

Limitation:
- The system will not handle pizza deliveries; it only simulates the process
- The system will not include payment processing
- No order tracking

Wireframes for all the webpages:
- Home page
